

Timmer's 100" wingspan and DC Motor effectively cool and complement spacious interiors

# VERSATILE BY DESIGN

ARVIO ADDRESSES THE MYRIAD NEEDS OF CLIENTS WITH A PORTFOLIO OF CLEVER PROPOSITIONS

**Inspiration in interior design is key in creating a sanctuary where mind, body and spirit are in harmony with each other. Arvio frees the imagination with a portfolio of innovative ideas, crafting first-of-its-kind fans in a spectrum of sizes.**

Arvio, by Alpha Home Appliances, is familiar with the lifestyles of discerning Malaysians and the breadth of needs and desires they demand. From compact condominiums to sprawling bungalows, it offers evocative solutions to varying ceiling heights and room configurations.

Natural wood beautifully complements most interior décor themes, a philosophy not lost on Arvio. **Timmer** spreads its wings with the majesty of an eagle, stretching its pinewood blades at 72" as well as an astonishing 100",

a feat never before seen here. Its exaggerated dimensions evoke a sense of bringing nature indoors and theatrically so — its inspiration, after all, was the gigantic trees of the Norwegian woodlands. Handpicked New Zealand pinewood crafts this timeless and enduring objet d'art, produced in limited quantities.

Sleek lines and elongated proportions give **Kysten** notable grace. Measuring at 60" and 70", the balsa wood blades are particularly large but lightweight.

At 42", 60" and 70", **Klara**

revels in fluidity with curved corners and a twist on the inner blades for depth and dimension.

Meanwhile, reminiscent of a pinwheel and fashioned from hardy maple bark, the folded blades of the compact **Vind** are just 30" and 50". In expansive spaces, a pair of these paint a pretty picture as they spin merrily in perfect tandem.

Dramatic and poised yet incredibly versatile, the standout designs are a symphony of natural materials, artistry and craftsmanship. Clean lines and rich textures swathe the

minimalist designs to create pieces that blend seamlessly into contemporary, traditional and professional settings alike.

High ceilings pose no impediment as models such as **Kysten** boast long downrods and the high torque DC Motor. Arvio developed the DC Motor to be both powerful and energy-efficient, reducing energy usage by up to 70%. Clever blade designs ensure a wide radius of ventilation and up to six speeds of fan speed selections prove capable of cooling expansive or high-ceilinged rooms effortlessly.

In-house technicians are professionally trained to handle even the most complex of installations. The result is an affixed piece of functional art secure for frequent and high speed use.

With such flexibility in creating spaces conducive to work and play, you are only really limited by your imagination.

The pinwheel-inspired Vind is crafted from maple wood
